Sulfodene®

First Aid Skin Medication for Dogs

SULFODENE® SKIN MEDICATION is formulated to be effective as an aid in the treatment of certain common skin inflammations in dogs. Recommended specifically as an aid for Hot Spots (Moist Dermatitis). Also, SULFODENE® is an effective first aid for scrapes and abrasions.

SIGNS: These skin inflammations may be accompanied by itching so intense that the animal rubs, scratches and bites incessantly. Other signs associated with these skin inflammations include hair loss, redness, scaling and secondary infection.

DIRECTIONS FOR USE: Clip hair from around affected areas and apply SULFODENE® freely with an applicator such as cotton or soft, clean cloth twice a day. If condition does not improve within one week, consult your veterinarian.

WARNING: Rarely, minor allergic skin reactions occur in persons applying this product or in dogs following usage. Wash hands immediately after applying. Should this occur in dogs, discontinue use and wash the treated area with water. Flammable. Keep away from heat or flame. Keep away from eyes. For external use only. Keep this and all other medications away from children.

Active Ingredient: 2-Mercaptobenzothiazole

Also Contains: Isopropyl Alcohol 2%
